SUTD engineering and entrepreneurship student who ships production AI agents; seeking AI and software internships.

Education

Singapore University of Technology and Design Singapore
BEng (Engineering Systems and Design), MSc Technology Entrepreneurship *Expected May 2030*

- **Coursework:** Algorithms & Object-Oriented Programming, Machine Learning, Data Modelling & Visualisation
- **1 of the 6 recipients** of the SUTD Technology Entrepreneurship Programme Scholarship

Experience

Univers Pte Ltd Aug 2026 – Present
Intern – AI Business Consultant (Aviation, Transportation, Logistics – GTM)

- Built and deployed an AI Decarbonisation & Audit Agent (Next.js, Vercel AI SDK, Groq) that automates ESG disclosure ingestion and client claim verification, saving ~3 hours of research per facility audit.
- Built and calibrated an HVAC energy-consumption regression model to validate client energy assumptions, with estimates within 2–3 percentage points of observed consumption ranges.
- Analysed operational workflows and industry benchmarks to prioritise AI and energy-management use cases by impact, telemetry availability, feasibility and implementation effort.
- Advised the Senior Director, Global Lead and senior client stakeholders, turning technical analysis into business cases, solution requirements and implementation roadmaps.

EvanYapFitness Sept 2024 – Jan 2026
Founder

- Built an online coaching business to 30 paying clients and $4k monthly revenue; grew the audience to 2.2k followers and 10k average views per post by testing content and messaging against analytics.
- Built a Google Form and Excel intake pipeline and an AI-assisted (Perplexity) workflow that drafts training and meal templates for manual refinement, cutting programming time per client by 50%.

Projects

Univers Website Revamp Challenge (Top 5 of 100 Entries) | *JavaScript, Three.js, CSS3, Vercel* Sept 2026

- Placed ahead of senior solution architects with a 9-page EnOS™ website redesign, pitched live to the CEO.
- Built in framework-free JavaScript with a 7-language i18n engine, a Three.js particle mesh, an executive ROI modeler and an operations simulator, auto-deployed on Vercel.

Autonomous Trading Agent | *Python, Webull OpenAPI, Claude API, SQLite* Sept 2026

- Built a Python swing-trading agent on the Webull Singapore API with a deterministic risk engine (1% daily-loss breaker, 5% drawdown limit, automatic stop-loss) and a SHA-256 hash-chained SQLite audit ledger.
- Backtested a momentum baseline over 2 years (Jan 2024 – Sep 2026) at a 1.42 Sharpe and 61% return, then A/B-tested a two-tier Claude (Haiku, Opus) screening layer against it.

EGO Telegram Personal Assistant | *Next.js, TypeScript, Vercel AI SDK, Claude API, GCP Pub/Sub* Aug – Oct 2026

- Automated expense capture from Apple Pay (iOS Shortcuts), DBS/PayLah!, Grab and e-commerce receipts via Gmail Pub/Sub push, cutting sync time by ~75% with parallel parsing.
- Built an orchestrator agent that chains finance, workout, calendar, to-do, email-draft and bill-splitting tools from one typed message, photo caption or voice note, reaching 97% routing accuracy (34/35) on a live eval set.
- Evolved intent routing into tool-calling sub-agents (Vercel AI SDK) with 17 tools that search, edit, delete and undo Google Sheets records from plain-language requests like “change that to $15”.
- Built a Claude model router (Haiku → Sonnet → Opus escalation, Perplexity Sonar search with circuit breaker), a voice-note and receipt pipeline, and security hardening (prompt-injection guardrails, PII redaction, AES-256-GCM).

Project V-Bây (2nd Place, Vietnam Grand Challenge Hackathon) | *Strategy & Market Research Lead* May 2026

- Led market research and strategy for an AI telecom honeypot platform against voice phishing, sizing Vietnam at $350M TAM and $7.5M SOM by 2027 with a B2G/B2B go-to-market roadmap.
- Built a 3-year financial model (break-even in 24–36 months); pitched to 4 investors, 1 expressed strong interest.

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, C, SQL, HTML/CSS
Frameworks & Tools: Next.js, React, Node.js, Vercel AI SDK, OAuth 2.0, Telegram Bot API, Vercel, Google Cloud APIs
AI & Data: LLM agents, prompt engineering, Claude API, Perplexity Sonar, Groq, regression modelling, Excel

Additional

Leadership & Awards: Floorball Captain; House Exco (Events, Hostel Works); Best Storytelling nominee (Dragon Tiles)
Interests: Competitive fitness & powerlifting (HYROX athlete), guitar, coffee, volunteering with church worship ministry.
